REPORT

RELATING TO THE REGISTRATION OF

BIRTHS, MARRIAGES AND DEATHS

IN THE

PROVINCE OF ONTARIO

FOR THE

YEAR ENDING 31st DECEMBER

1950

(EIGHTY FIRST ANNUAL REPORT)

PRINTED BY ORDER OF THE LEGISLATIVE ASSEMBLY OF ONTARIO SESSIONAL PAPER No. 51, 1950

TORONTO

Printed and Published by Baptist Johnston, Printer to the Queen's Most Excellent Majesty
1952

To His Honour the Lieutenant-Governor of the Province of Ontario May It Please Your Honour:

I herewith beg to present for your consideration the Eighty-first Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario during the year 1950.

Respectfully submitted,

G. H. DUNBAR, Registrar-General of Ontario.

SIR:

I have the honour to submit for your approval the Eighty-first Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1950.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE, Deputy Registrar-General.

To the Hon. G. H. Dunbar, Registrar-General of Ontario.

INTRODUCTION

This report is divided into two parts. Part I consists of an analytical survey of the Vital Statistics of the province in the form of narrative summaries, summary tables and charts. Its objectives are (1) to indicate (in so far as can be portrayed by vital statistics) the general trend over the past several years, in the general state of the health of the people of Ontario; (2) to assess the vital statistics of 1950 in the light of these general trends; and (3) to bring to light certain specific problems in the field of public health, such as infant and maternal mortality and deaths from specific diseases such as cancer and tuberculosis and those resulting from accidental causes. Part II consists of detailed tables covering vital statistics for the year 1950. In the interests of economy several tables are not printed in this report. These are listed in the Table of Contents and the information is available upon request providing that such requests, in the opinion of the Registrar-General, are sufficiently warranted and urgent in the public interest.

PART I.—COMPARATIVE AND ANALYTICAL SUMMARY

Population

For reference purposes the estimated population of the province over a period of about two decades is shown by sex in Table A, while a distribution by sex and age-groups of the estimated population of 1950 is provided in Table B.

TABLE A—POPULATION, CENSUSES 1921, 1931 AND 1941 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX, ONTARIO

Year	Total	Male	Female	Year	Total	Male	Female
1921	2,933,662	1,481,890	1,451,772	1936	3,606,000	1,835,000	1,771,000
1922	2,980,000	1,507,000	1,473,000	1937	3,637,000	1,850,000	1,787,000
1923	3,013,000	1,525,000	1,488,000	1938	3,672,000	1,867,000	1,805,000
1924	3,059,000	1,550,000	1,509,000	1939	3,708,000	1,885,000	1,823,000
1925	3,111,000	1,578,000	1,533,000	1940	3,747,000	1,904,000	1,843,000
1926	3,164,000	1,606,000	1,558,000	1941	3,787,655	1,921,201	1,866,454
1927	3,219,000	1,635,000	1,584,000	1942	3,884,000	1,966,000	1,918,000
1928	3,278,000	1,666,000	1,612,000	1943	3,917,000	1,983,000	1,934,000
1929	3,334,000	1,696,000	1,638,000	1944	3,965,000	2,005,600	1,959,400
1930	3,386,000	1,724,000	1,662,000	1945	4,004,000	2,016,600	1,987,400
1931	3,431,683	1,748,844	1,682,839	1946	4,101,000	2,068,300	2,032,700
1932	3,473,000	1,769,000	1,704,000	1947	4,189,000	2,113,000	2,076,000
1933	3,512,000	1,788,000	1,724,000	1948	4,297,000	2,170,000	2,127,000
1934	3,544,000	1,804,000	1,740,000	1949	4,411,000	2,231,200	2,179,800
1935	3,575,000	1,820,000	1,755,000	1950	4,512,000	2,283,400	2,228,600

The estimated populations for 1932 to 1940 and 1942 have been revised and the necessary adjustments have been made in the tables showing rates.

TABLE B-ESTIMATED POPULATION OF ONTARIO, BY SEX AND AGE-GROUP, 1950

Age-Group	Total	Male	Female	Age-Group	Total	Male	Female
Under 5 5- 9 10-14	331,300	238,500 195,800 168,900	226,300 186,600 162,400	50-54 55-59 45-59	245,300 220,900 735,000	125,300 112,700 375,500	120,000 108,200 359,500
0-14		166,900 178,600 182,000 527,500	575,300 162,900 176,100 178,400 517,400	60-64 65-69 70-74 60-74	189,700 150,800 110,800 451,300	96,100 75,200 54,000 225,300	93,600 75,600 56,800 226,000
30-34	347,100 321,200 294,700 963,000	174,800 162,300 150,300 487,400	172,300 158,900 144,400 475,600	75-79	72,400 40,600 18,300 131,300	34,400 18,600 8,100 61,100	38,000 22,000 10,200 70,200
45-49	268,800	137,500	131,300	70 and over	8,000 4,512,000	3,400 2,283,400	4,600 2,228,600

Figures supplied by Social Analysis Branch, Dominion Bureau of Statistics.

^{*}These estimates do not take into account interprovincial migration, figures for which are not available for intercensal years.

The rural and urban distribution of the 1950 estimated population was as follows:—

Assessed

s:—	Assessed Population	Per cent
Incorporated centres *10,000 population and over Incorporated centres *5,000 to 10,000 population Incorporated centres *1,000 to 5,000 population	1,950,979 273,927 367,707	43.2 6.0 8.1
Rural Population (including incorporated centres under 1,000*)*	1,919,387	42.5

Births and deaths for the year 1950 are classified by place of residence, marriages being classified by place of occurrence.

Tables 7, 8, 23, 24, 30 and 31 have totals by place of occurrence and place of residence.

Natural Increase

The natural increase in the population and the computed rates for the period 1922 to 1950 are shown in Table C.

TABLE C-NATURAL INCREASE AND NATURAL INCREASE RATES, ONTARIO, 1922-1950

ONTARIO, 1922-1950										
Year	Live Births	Deaths	Excess of Births over Deaths	Natural Increase Rate per 1,000 Population

1948 1949 1950	104,195 106,601 108,708	43,379 43,948	63,222 64,760	14.3						

A slight decrease in the birth rate was evident in 1944 and 1945, a definite increase for the years 1946, 1947, 1948, 1949 and 1950 with the year 1947 showing the highest rate ever obtained.

Births

Table D presents an historical summary of births, stillbirths and illegitimate births, together with computed rates for each, while Chart 1 portrays the general trends over the same period.

TABLE D—SUMMARY OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS, AND RATES, ONTARIO, 1922-1950

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly in 1948, 1949 and 1950, when the rate was 24.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1950 for every 1,000 babies born alive, 17 were stillborn.

It is to be noted that the number of illegitimate births for the year 1950 had dropped to 3,772. This figure represents children born to single mothers. Tables 10, 11 and 13 show that there were 518 children born to widowed, divorced and separated mothers.

Tables E, F and G provide a breakdown of births by age of mothers for the same three groups, and indicate to some degree the extent to which age has contributed to the trends outlined above, while Chart 2 provides an interesting picture of the age distribution over the same period on the basis of five-year averages.

NOTE:—Births to mothers of "not stated" ages have been distributed on the basis of specified ages.

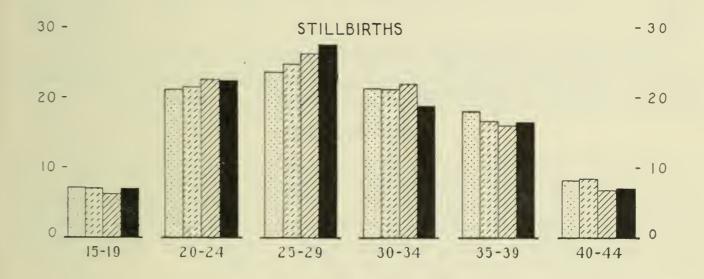

Chart 2

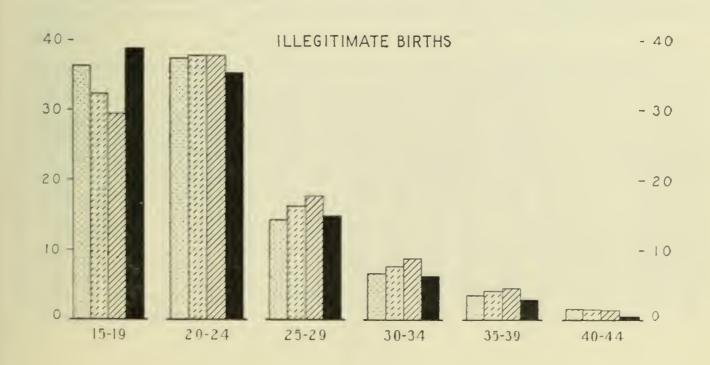

PERCENTAGE OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS

IN EACH AGE GROUP OF MOTHERS ONTARIO

FIVE-YEAR AVERAGES 1931 - 1945 AND FOR THE YEAR 1950

There has been a general tendency towards younger motherhood. Of every 100 babies born alive in 1950, 7 were to mothers under 20 years of age, 28 to mothers 20-24, and 31 to mothers 25-29, or a total of 66 children to mothers under 30 years of age.

There are indications that the number of stillbirths per 1,000 deliveries has been decreasing at an encouraging rate and that this has been evident for each age-group of mothers under 40 years of age. For example, of every 1,000 deliveries among mothers 15-19 in 1950, 16 were stillborn as compared with 29 in the period 1922-27; among mothers 20-24 years of age, 14 as compared with 30; among mothers 25-29 years of age, 16 as compared with 33, with similar encouraging figures for older mothers, although the risk of stillbirth delivery increases rapidly for mothers over 35 years of age.

AVERAGE NUMBER OF STILLBIRTHS PER 1,000 DELIVERIES

Years	Age of Mother											
	15-19	20-24	25-29	30-34	35-39	40 and over						
1922-27	29	30	33	39	49	64						
1928-32	27	27	30	37	48	63						
1933-37	27	25	28	34	45	64						
1938-42	24	21	25	31	43	58						
1943-47	18	17	20	24	33	47						
1948	15	16	15	22	29	38						
1949	17	15	15	20	29	40						
1950	16	14	16	17	29	47						

With respect to illigitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1950, 75 were to this group of mothers.

Infant Mortality

Table H and Chart 3 both show very clearly that although infant and neonatal mortality rates have declined during the past ten years the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period. The neonatal rate for 1949 was 23.4 per 1,000 live births as compared with 22.6 in 1950.

Sixth Revision of the International Lists of Diseases and Causes of death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1950 being 552 as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950 and thosefor the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" show a considerable increase.

Maternal Mortality

From Table K, it will be noted that a considerable reduction in the number of deaths of mothers during childbirth has taken place during the past 20 years, and particularly during the past 5 years, with the 1950 rate being considerably below the average of the last decade. In general, the reduction in the rate seems to be apparent in all age groups.

TABLE K-MATERNAL DEATHS, AND RATE PER 1,000 LIVE BIRTHS, BY AGE, ONTARIO, 1941-1950, WITH FIVE YEAR AVERAGES, 1931-1950

^{*} Rates not computed because of small numbers.

The tables which follow present the distribution of maternal deaths during 1950 by locality.

The rates shown in Table L are of special interest in that they indicate clearly the general downward trend in maternal mortality in cities, towns and rural areas of the province, the rates for 1950 being 0.7 per 1,000 live births in cities, 0.7 in towns and 1.0 in the rural areas.

General Mortality

Table M presents an historical summary of deaths by sex in the province and the computed crude death rates over a 28-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

TABLE M—DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 1,000 POPULATION, ONTARIO, 1923-1950

Table N presents both male and female crude death rates for each 5-year age-group, based on the population as enumerated at the censuses of 1941 and as estimated for the years 1943 to 1950. There are several features with respect to changing death rates which are worthy of comment, notable among which is the remarkable decrease in the death rate of children under 5 years of age from 13.5 in 1943 to 10.6 in 1950 for males and from 10.5 in 1943 to 7.9 in 1950 for females. Similar declines are apparent in other age-groups.

This latter fact is clearly portrayed in Chart 4 which depicts the percentage of deaths occurring in each age-group of the population.

Causes of Death

The deaths shown in Table O (1) are for selected causes or groups of causes to which, during the past 10 year period, more than 75 per cent of total deaths have been recorded. A large part of the increase in certain diseases for the year 1950 is due to the new selection procedure as outlined by the Sixth Revision of the International Lists of Diseases and Causes of Death.

Chart 4

Chart 5

DEATHS FROM

TUBERCULOSIS, CANCER AND PNEUMONIA ONTARIO, 1900-50

Rates per 100,000 population

Mortality from Tuberculosis

Table R (1) shows the deaths from all forms of tuberculosis in the province from 1941 to 1950. Table R (2) shows the death rates per 100,000 population classified by the age of the decedents for 1946, 1947, 1948, 1949 and 1950. During the year 1950 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 13.0 per 100,000 of population. Chart 5 illustrates the decided reduction in mortality from tuberculosis which has taken place since the beginning of the century.

Table Z in Part 1 of this report gives details of deaths and death rates for counties according to place of occurrence and place of residence for the year 1950.

Mortality from Cancer

Chart 5 illustrates the steady upward trend in the mortality rate from cancer. The increase in the total number of deaths since 1941 is shown in Table S (1) and is apparent in most of the age-groups particularly among older persons. Table S (2) shows the rate from 1941 to 1950 by sex and indicates that the female rate is higher than the male rate, but the death rate for males has increased more rapidly than that for females.

TABLE S (1)—DEATHS FROM CANCER, BY AGE AND SEX, ONTARIO, 1941-1950

Marriages

From Table W it will be noted that there have been significant fluctuations in the number of marriages in the province from 1925 to 1950.

TABLE W-MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION, ONTARIO, 1925-1950

Year	Number	Rate per 1,000 Population	Year	Number	Rate per 1,000 Population

Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past three censuses.

	1921*	1931	1941
Divorced persons—Male	1,135	1,071	2,291
Female	1,369	1,015	2,865
Per cent of population—Male			0.12
Female	0.09	0.06	0.15

*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table X. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts there has been a steady annual increase.

TABLE X—DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1950, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1950

Year	Dissolu- tions of Marriage	Rate per 100,000 Popula- tion	Year	Dissolu- tions of Marriage	Rate per 100,000 Popula- tion	Year	Dissolu- tions of Marriage	Rate per 100,000 Popula- tion	DISSOL GRANTE Hus- bands		Ratio of Dissolutions to Males per 1,000 Dissolutions to Females
